

Your sound, our mission

Guitar world, like every musical instrument, every day offers new products able to attract guitar lovers, establishing new targets.

But often you cannot get a fair and appassionate point of view about new gear, their capabilities and features and, above all, the most appropriate way to improve the sound and performance of your setup

Supported by years of experience on stage and behind the scenes, Choptones Staff offers a wide perspective on all of this, in addition to programming services for most of the device available on the market.

Our guitar sound shaping professional proposal, make possible for every guitar / bass player to get the sound more powerful and functional for every kind and style of playing.
